## **Easyfit™ Introduces New “EasyRail” Safety Railing Kits with Pre-Built Uprights for Fast, Easy Installation of OSHA-Compliant Railing**

(APRIL 2009) – Easyfit, Inc., North Canton, Ohio announces the introduction of its “EasyRail” safety railing kits featuring pre-built uprights to reduce installation time and costs. The EasyRail safety barrier system is designed to be used around machinery and equipment as well as walkways and other areas where personnel access should be restricted because of safety concerns. EasyRail meets OSHA standards, and since each upright is pre-assembled, every railing set-up will be OSHA-compliant without measuring, according to Easyfit.

EasyRail can be assembled quickly and easily by placing the supplied horizontal rails through the corrosion-resistant pipe fittings on the pre-built uprights and using only a hex key to tighten the set screws. No welding, threading or drilling is required, and EasyRail may be secured using bolts or chemical anchors attached to the base fittings, the company states.

EasyRail safety railing kits are pre-packaged with six-foot post spacing will create a railing or enclosure approximately 12 feet long. They are available either as a Straight Kit or Corner Kit plus an Extension Kit that will add six feet to the installation. The 1-1/2” pipe rails included with EasyRail are powder-coated “Safety Yellow” for greater visibility and may be cut-to-size where shorter sections are needed, Easyfit says.
