Easyfit™ Introduces New Model EF42 Crossover Joint Pipe Fitting

Company also announces move to a larger facility.

(OCTOBER 2005) – Easyfit, Inc., North Canton, Ohio announces the introduction of its new EF42 slip-on structural pipe fitting. The new fitting provides a 90-degree crossover joint to build railings, racks, tables, frames, awnings, displays, store fixtures, carports, boat docks, playground equipment, safety barriers, theatrical sets, greenhouses, and other tubular pipe structures. The company also announced that it has moved from Beachwood, Ohio to a larger facility in North Canton, Ohio to accommodate growing business needs.

Easyfit states that although the new EF42 crossover fitting can be used to build original structures, it is ideal for adding on to existing structures. It is available to fit three standard pipe sizes including Easyfit Size 25 (1-inch), Size 32 (1-1/4"), and Size 40 (1-1/2"). The new EF42 fitting is designed to carry and support rails, as pipe is not joined within the fitting. Constructed of malleable iron for durability, and galvanized for corrosion resistance, the new EF42G fitting and other Easyfit products can be ordered online at www.Easyfit.com.
